Announcing a new series . . .

Ultrastructure in Biological Systems

Edited by ALBERT J. DALTON
National Cancer Institute, Bethesda, Maryland
and FRANÇOISE HAGUENAU
Collège de France, Paris

In this series of books primary emphasis will be placed on the timeliness and pertinence of the subject matter, excellence in reproduction of electron micrographs, and rapidity of publication. By rapid publication, the volumes will serve not only to review a given subject but also to discuss current views, concepts, and recent experimental results. Areas to be covered in the near future include mitosis in animal cells, spermiogenesis, and ultrastructure of plant cells.

Tumors Induced by Viruses : Ultrastructural Studies

Edited by ALBERT J. DALTON and FRANÇOISE HAGUENAU

March 1962, 229 pp., \$9.50

Tumors Induced by Viruses: Ultrastructural Studies, the first book in the series, is representative of the scope and general form to which future volumes will adhere. The authors of the various chapters are all engaged in studies in the area of tumor viruses. They have been students and personal friends of Professor Charles Oberling, to whom this volume is a memorial.
